

Test Plan of Orange HRM

Orange HRM Web Application

Manual Testing Project

Prepared By: Sujal Virdande

Role: QA Engineer / Software Tester

Application Under Test: Orange HRM Open Source

Testing Type: Manual Testing

Document Version: Version 1.0

Date: 28 May 2026

Project Repository GitHub: <https://github.com/Sujalll05>

Prepared For: Quality Assurance Portfolio Project

10	Risk Analysis	13
11	Assumptions and Dependencies	14

1. Introduction

This Test Plan outlines the testing scope, strategy, and schedule for the Orange HRM web application. It serves as the central reference for all testing activities carried out on this project.

Orange HRM is an open-source Human Resource Management (HRM) system that helps organizations manage employee information, user accounts, leave requests, recruitment activities, and other HR-related processes.

Testing will cover key modules including Login, Admin, PIM, Leave, Recruitment, and My Info. Test cases will be designed, executed, and results recorded to identify defects and evaluate the overall quality of the application.

2. Objectives

- The following objectives guide this testing effort:
- Specifically, this project aims to:
 - To verify the functionality of different modules of the application.
 - To validate the user interface and user experience.
 - To check whether the application behaves correctly for valid and invalid inputs.
 - To identify and report defects found during testing.
 - To ensure that the application meets the expected requirements.
 - To improve the overall quality and reliability of the application before release.

3. Scope

The scope of this project encompasses the major functional modules of the Orange HRM web application. Testing will validate user-facing behavior, form interactions, navigation flows, and error handling across these modules.

The primary focus is on functional testing, UI validation, and navigation across the in-scope modules listed below.

3.1 In-Scope Features

The following modules and functionalities are included in the scope of testing:

- Login functionality

- Forgot Password functionality
- Dashboard module
- Admin module
- PIM (Personnel Information Management) module
- Leave management module
- Recruitment module
- My Info module
- User profile management
- Logout functionality
- Form validations and error messages
- Navigation between modules

3.2 Out-of-Scope Features

The following areas are not covered in this testing activity:

- Performance Testing
- Load and Stress Testing
- Security Testing and Penetration Testing
- Database Testing
- API Testing
- Mobile Application Testing
- Third-party integrations
- Browser compatibility testing on multiple browsers

The scope of this project is limited to manual testing of the Orange HRM web application using the available test environment.

4. Test Strategy

For this project, I will perform manual testing of the Orange HRM web application. The testing will be carried out by creating and executing test cases for different modules of the application.

The testing approach includes:

- Functional Testing to validate that each module behaves correctly for both valid and invalid inputs.
- UI Testing to check the appearance and usability of the application.
- Validation Testing to verify error messages and input field validations.
- Smoke Testing to ensure the main functionalities are working properly before detailed testing.
- Regression Testing to verify that previously working features continue to function correctly after changes or fixes.

All test results and defects will be recorded throughout execution. The goal is to deliver a well-documented, reliable test cycle that demonstrates thorough coverage of the application.

5. Test Environment

The testing of the Orange HRM web application will be performed in the following environment:

Component	Details
Application Under Test	Orange HRM Open Source
Testing Type	Manual Testing
Operating System	Windows 11
Browser	Google Chrome
Test Environment	Web Application
IDE	PyCharm Community Edition (for automation practice only)
Programming Language	Python (for automation practice)
Automation Tool	Selenium WebDriver (planned for automation practice; not used in this manual testing phase)
Test Case Management Tool	Microsoft Excel
Documentation Format	PDF and Excel
Version Control	Git & GitHub
Internet Connection	Stable Broadband Connection

The test environment is configured to execute and document manual test cases for the Orange HRM application. All test results and defects identified during testing will be recorded and maintained for analysis.

6. Test Deliverables

During this testing project, I will prepare and maintain the following deliverables:

- A Test Plan document describing the testing approach and scope.
- Test cases covering the major functionalities of the Orange HRM application.
- Test execution results showing the status of executed test cases.
- Defect reports for any issues identified during testing.
- A Test Summary Report containing the overall testing outcome.
- Supporting screenshots wherever required.
- PDF and Excel documents containing all testing artifacts.
- A GitHub repository to store and manage all project-related files.

These deliverables will help me track the testing activities, document the results, and maintain proper records of the testing performed on the application.

7. Entry Criteria

Before starting the testing process, I will ensure that the following conditions are met:

- The Orange HRM application is accessible and functioning properly.
- My test environment is ready, including a Windows 11 laptop and Google Chrome browser.
- Valid test user credentials are available for testing different functionalities.
- I have explored the application and understand the modules that need to be tested, such as Login, Admin, PIM, Leave, Recruitment, and My Info.
- The test plan and test cases have been prepared and reviewed.

Once these conditions are met, I can begin test execution.

8. Exit Criteria

Testing will be considered complete when the following conditions are met:

- All planned test cases have been executed.
- Test results have been recorded and documented.
- Any defects identified during testing have been reported.
- Critical and high-priority defects have been verified after fixes, if applicable.
- A test summary report has been prepared.
- All testing deliverables have been updated and stored in the project repository.

Once these activities are completed, the testing process can be concluded.

9. Test Schedule

The testing activities will be performed according to the following schedule:

Activity	Duration
Test Plan Preparation	1 Day
Test Case Design	2 Days
Test Execution	3 Days
Defect Reporting	Throughout Testing
Test Summary Report Preparation	1 Day

The schedule may be adjusted depending on the testing progress and issues identified during execution.

10. Risk Analysis

The following risks may affect the testing process:

- The OrangeHRM demo environment may experience downtime or session resets, interrupting test execution mid-cycle.
- OrangeHRM open-source updates may alter module behavior or UI between test runs, requiring test case revisions.
- Test data (employee records, leave balances) added during testing may be reset by other users on the shared demo environment, affecting repeatability.
- Some OrangeHRM modules (e.g., Recruitment workflows) require specific role-based permissions that may not be available with default test credentials.
- As a solo tester, time constraints may limit coverage of edge cases and negative scenarios within the planned schedule.

Mitigation strategies include taking screenshots at each test step, maintaining a local copy of test data, and prioritizing high-impact modules in the execution schedule.

11. Assumptions and Dependencies

The following assumptions and dependencies are considered for this project:

- The Orange HRM application will remain accessible throughout the testing period.
- Valid user credentials will be available for testing.
- A stable internet connection will be available.
- The test environment (Windows 11 and Google Chrome) will remain available and functional.
- All modules included in the testing scope will be accessible.
- The test cases are prepared based on the current functionality of the application.
